i Acknowledgments
The Forgotten Wrecks of the First World War project was generously funded by the Heritage Lottery
Fund through their Heritage Grants Programme.

MAT would like to thank all the volunteers who gave up their time to help with research and to dive
on the SS Hazelwood. Roger Burns, Tom Harrison, Jane Maddocks and Michael Pitts.
Special thanks also to local dive boat skipper and historian Dave Wendes who made his research
collection available for scrutiny by MAT staff.

MAT staff involved in fieldwork: Jan Gillespie, Brandon Mason and Garry Momber.
MAT staff involved in research and reporting: Jan Gillespie, Laura Johansson, Jasmine Noble Shelley,
Julie Satchell.

1. Project Background
Forgotten Wrecks of the First World War is a Heritage Lottery Funded project which is dedicated to raising the profile of a currently under-represented aspect of the First World War. While attention is often focused on the Western Front and major naval battles like Jutland, historic remains from the war lie, largely forgotten, in and around our seas, rivers and estuaries.

With over 1,100 wartime wrecks along England’s south coast alone, the conflict has left a rich heritage legacy and many associated stories of bravery and sacrifice. These underwater memorials represent the vestiges of a vital, yet little known, struggle that took place on a daily basis, just off our shores.

The study and promotion of these archaeological sites presents a unique opportunity to better interpret them and improve physical and virtual access.

The project focuses on underwater and coastal sites between Kent and Cornwall, which include merchant and naval ships, passenger, troop and hospital ships, U-boats, ports, wharfs, buildings and foreshore hulks. These sites, under water and on the foreshore, have been degrading and deteriorating due to natural and human processes for approximately 100 years and, as a result, are extremely fragile. In many cases, this project represents a final opportunity to record what remains on the seabed and foreshore before it is lost forever.

The project aims to characterise the nature and extent of the maritime First World War archaeological resource surviving on the south coast’s seabed and around the coast. This will enable an understanding of maritime activity just off our shores during the conflict and provide a window onto some of the surviving sites. While it will not be possible to visit and record all c.1,100 vessels dating to the First World War, lost off the south coast of England, a representative sample of sites have been selected for more detailed study, analysis and interpretation. This report collates information collected during the project, relating to one of the south coast’s First World War wrecks, namely that of SS Hazelwood.
2. Methodology
General detail on the methodologies employed during the project are outlined within Forgotten Wrecks of the First World War: Project Methodology Report, this report section concentrates on approaches and resources relating specifically to the SS Hazelwood.

2.1 Desk Based Historic Research

Online information/sources
A range of online sources were searched for information on Hazelwood, with the following being identified:

Records at other archives/collections
The personal records relating to SS Hazelwood of historian Dave Wendes were consulted with his kind permission. A photograph of the ship in his records from the RA Snook/FW Hawkes collection is presented in this report.

2.2 Associated Artefacts
While the Forgotten Wrecks project had a non-recovery policy, where possible, the project aimed to ‘virtually reunite’ artefacts historically recovered from the Forgotten Wrecks.

Research identified six artefacts that have been reported to the Receiver of Wreck (Droit A/933), as indicate on the PastScape record they are one sounding lead, one porthole, two valves and two gauges. These artefacts are assumed to be in private ownership.

2.3 Site Visit/Fieldwork
Forgotten Wrecks site visits and fieldwork aimed to:
- Provide opportunities for volunteers to access and take an active role in the recording and research of a range of different types of maritime First World War site.
- Record extant remains for heritage records.
- Record extant remains for public dissemination, enabling ‘virtual’ access for those not able to achieve physical access.

The most appropriate methods for site recording were chosen on a site-by-site basis, and included: site sketch, measured survey, photography and/or video.

Forgotten Wrecks funded diving from the dive boat Wight Spirit took place on the wreck of the SS Hazelwood on 12 August 2016 and 16 June 2017.

Initial dives aimed to assess the condition of the remains and obtain a sketch drawing, then to build on this information with a measured sketch/survey and photographic recording where possible.

A total of seven divers (four professional divers from MAT and three volunteers) undertook a total of 400 minutes diving on the wreck over the two days. The dive team used self-contained breathing apparatus (SCUBA) with a breathing gas of enriched air nitrox (EANx) using accelerated decompression procedures.

The very dark black-out conditions on the first dive prevented the use of video to record the site as intended and photography proved difficult. Conditions were slightly improved on the second dive but still very dark.
3. Vessel Biography: SS Hazelwood
SS Hazelwood was chosen as one of the Forgotten Wrecks case study sites because the identity of the wreck thought to be that of the Hazelwood had not been conclusively proven. The vessel also represents one of the vessels sunk with all hands (crew of 32) during the First World War.

3.1 Vessel Type and Build
SS Hazelwood was built by Roper & Son in Stockton and completed in February 1904. The ship was a steel screw steamer with one deck having a gross tonnage of 3120. The 325ft (c.99m) long ship had a beam of 48ft (c.14.5m) and was powered by a three cylinder triple expansion engine with two single ended boilers. Nominal horse power was 273 (Wendes, 2006:106).

3.2 Pre-war Career
Built for and operated initially by Joseph Constantine, and manager, Warley Pickering, both of Middlesbrough, the vessel Hazelwood was quickly plying its merchant trade from the UK. Prior to the war, ownership remained with Joseph Constantine and three other Constantines, Pickering renounced his 29 shares by 1912 passing them to Ella Pickering who married, retaining her 29 shares. There were four other shareholders each with one of the 64 shares, and in October 1916, all shares passed to The Gascony Steamship Co Ltd of Middlesbrough (TNA BT/110/324/13).

A brief summary of the ship’s voyages through pre-war years offers an indication of the locations to which Hazelwood sailed prior to the war (The British Newspaper Archive, 2017):

3.3 First World War Use & Loss
The Hazelwood was a British vessel, owned and operated by Constantine & Pickering Steam Ship Company (official number 113908). At the time of the sinking the Hazelwood was on route from the Tyne bound for Nantes with a 32 man crew and was carrying a cargo of coal. The vessel was armed with a 12 pound, 12cwt stern gun.

On 19 October 1917, the Hazelwood was lost without sending a distress call. There was speculation as to where and how it was lost. Initially it was believed that Hazelwood had struck a German mine laid by German submarine UC-62, the basis for this being a passing vessel, the SS Estonian heard shouts from the water (Pastspc, 2015). Estonian’s master, Captain T Jones, reported they were in a position 22 ½ miles west of St. Catherine’s Light when they heard the shouts in the darkness off the starboard bow, which he believed to be shipwrecked crew. He issued a distress call but could not stop to rescue crew owing to the danger of being attached. Responding patrol boats found the Hazelwood’s papers in a bag not far from the position reported by the Estonian and the body of the Hazelwood’s steward was found (Wendes, 2006). Some sources suggest that the shouts from the water could also have been after a torpedo strike, and this possibility is plausible when German submarine UC-75’s log was subsequently scrutinised indicating that the ship thought originally to have been torpedoed by it, SS Britannia, could have been the Hazelwood (U-boat.net, 1995-2017).

Mines had be laid by UC-62 between Anvil point and the Needles on 13 October 1917 (likely a field of 12 mines), nine mines were swept by minesweepers on 15 October 1917. Other sources therefore believe it is likely that it was one of these mines that accounted for the sinking of the Hazelwood, another one sank the SS Hartburn three days earlier (Wendes, 2006).

By all accounts, the Hazelwood sank rapidly without any survivors. The location is 22 ½ miles west of St Catherine’s on the Isle of Wight and eight miles south east of Anvil point (TNA ADM 137/1340, ADM 137/1344).
3.4 Associated Vessels

UC-75 is thought in some sources to have possibly torpedoed the Hazelwood. Launched on 6 November 1916, UC-75 was a type UCII German submarine commanded by George Paech, then Johannes Lohs (who may have sank Hazelwood), then Walter Schmitz. Initially in I Flotilla, it was reallocated on 5 August 1917 into Flandern II Flotilla, and carried out, in total, 13 patrols, sinking 56 ships totalling 82,864 tons, damaging eight ships totalling 40,021 tons, and sank two warships totalling 1,555 tons. On 31 May 1918, it was rammed and sunk by HMS Fairy while attacking a convoy, 19 men died and there were an unknown number of survivors. UCII submarines were a coastal minelayer class having seven torpedoes fired through either of two bow tubes or one stern tube, carrying 18 mines, and a 188mm deck gun.

UC-62 is the submarine that laid the mine that possibly sank the Hazelwood. This was a UCII class U-boat under the command of Oberleutnant Max Schmitz launched on 9 December 1916 and part of the Flandern Flotilla from March 1917. Under the same commander, UC-62 sank in the region of 11 ships (16,735 tons) and damaged three (3,057 tons). The submarine was finally lost with all hands on 14 October 1917 when it was mined on the Thornton Bank near Zeebrugge. 30 men perished including the commander Max Schmitz. The UC-62 was identified by markings on both propellers, it was previously thought to have been mined off Portland (Uboat net, 1995-2017).

3.5 People Associated with the SS Hazelwood

According to Wrecksite EU and Pastscape, there were 32 on board Hazelwood and no survivors. Wrecksite EU gives a detailed list of survivors but only 31. The “missing” person has not been accounted for. Within the detailed list, there are 21 British, three Eire, two Spanish, two Greek, one Japanese, one Australian, and one West Indian. The crew list can be found in Section 8.1 of this report.

In the casualty list, it is interesting that the Master, James Fortune Anderson, was born in Paisley and married to Elsa Margarete whose address is given as Kaiser Friedrich Strasse without the city, but this appears to be in Berlin. William James Cox, a Leading Seaman, is attributed as having a Long Service and Good Conduct Medal.

Nobody in the detailed list is identified as a “Gunner”, however, Murdo Maclean who lost his life is attributed as being a gunner (The Records of the Men of Loch Broom, no date).

3.6 Post-loss Activity

Due to the query over the exact position of the sinking of the Hazelwood there has historically been some confusion as to whether the wreck at this position might be that of the Saxmundham. The wreck is charted as being ‘possibly’ the Hazelwood. Extensive research carried out by historian and Dive boat skipper Dave Wendes, now makes all the evidence point to the likelihood that the wreck in this position is that of the Hazelwood.

4. Seabed Remains

4.1 Site Location and Environment

The Hazelwood is located 22 miles west of St Catherine’s light and 8 miles south east of Anvil point at position 50.47444 -1.8552 WGS84 (UKHO) (Figure 2). Although the identity of the wreck is still not positively proven, the position of the wreck is very close to the position where the men were heard shouting in the water by the crew of the SS Estonian.
Figure 2: Location of the wreck of SS Hazelwood

The wreck rests on a seabed of sand and shingle and is adjacent to a sand bank which appears to be relatively mobile. The Hydrographic Office wreck index indicates that that a 4-5m sand bank migrates back and forth across the site sometimes burying/or exposing parts of the wreck.

4.2 Archaeological Methodology

A dive in 2015 was hampered by very poor visibility a further dive in 2017 saw very dark conditions and a photogrammetry survey was carried out.

Tasks that might help with the identification of the wreck:

- Locate the box arrangement on the 2010 plan drawing by John Liddiard (Figure 6) described as ‘maybe part of gun mount.’ Carry out a close visual survey to establish whether there is a gun present nearby.
- Look for evidence of small (ie 3/4 up to 1” diameter) brass tubes in the midships section, probably in short lengths, which might indicate that the condenser has been salvaged. If such tubes are there in abundance and 2 –3 metres long then it has not been salvaged.
- Visual survey to try to locate engine pistons. It appears the engine has been blown apart or at least, has heavily degraded as there is little evidence of the engine block.
- Measure any pistons if located. If the wreck is the Hazelwood there ought to be a third piston on site.
- Search midships section for a possible donkey boiler.

4.3 Description of Surviving Vessel Remains

The wreck of the Hazelwood rests in around 40m of water with it’s highest part standing about six metres proud of the seabed. It is orientated with the bows to the NNE and is in an area where the sand shifts around, frequently covering and uncovering parts of the wreck.

Divers searched for clues for positive identification of the wreck in dark and murky conditions and photogrammetry was carried out around the wreck by two divers each using a Nikon D700 DSLR
camera in a Sealux CD7000 camera housing with one OrcaLight Seawolf 1860 diving light in a rugged casing. One began at the stern moving forwards and the other from the bow moving aft.

The steel hull is broken in many places with the hull plates laying around the seabed as are the fittings. The bow is lying over towards its starboard side with a mass of anchor chain and signs of an anchor winch near the bow.

A lot of the forward structure is buried, parts of another winch is evident when moving aft from the bow area. The two boilers were located but partly buried (Figure 3), a donkey boiler (smaller auxiliary boiler) was not observed.

![Figure 3: Boiler partially buried, various structural debris can be seen in the sand next to it](image)

No evidence of the brass tubes were located in the midships section so still difficult to tell if the condenser has been salvaged or not, particularly in the prevailing conditions.

A piston was located behind the boiler but no others were spotted in the poor conditions. The bore of the piston was measured to be 50cm but none of the rods were sighted (Figure 4 and 5). The engine is reported to be broken but much of it could have been covered by the shifting sands.
Figure 4: Pistons (in the distance) amongst a jumble of possible engine mountings

Figure 5: Piston with partially buried boiler in view
Moving towards the after area of the wreck various metal structure was encountered with parts of the propeller shaft in place running along towards the stern, but much of the remains were sparse and could be buried beneath the mobile sand and shingle.

A drawing by John Liddiard in 2010 which was listed as the Saxmundham is now believed to be that of the Hazelwood (Figure 6). The drawing indicates that bollards are present at the stern and that there is a box which it is speculated could be part of a gun mount. There is no mention on the drawing that the gun was present and no gun was located during the Forgotten Wrecks dives.

![Figure 6: A drawing of the Hazelwood (formally believed to be the Saxmundham) (©John Liddiard, reproduced with permission)](image)

The condition of the Hazelwood is consistent with what might be expected of a wreck that has survived the natural processes within the area in which it lies for a century. Although the extant remains appear partially broken down, it is suspected that some elements of the ship may still remain moderately preserved beneath the shifting sands.

5. Recovered Artefacts
Recovered artefacts reported to the Receiver of Wreck from the site thought to be the Hazelwood are listed as Droit A/933.

Artefact classification ‘Fixtures and Fittings’:
- Porthole
- Two valves
- Two gauges

Artefact classification ‘Navigation’:
- Sounding lead
6. Site Significance & Potential Further Research
The cause of the loss of the Hazelwood and the exact position the ship sank is somewhat inconclusive according to some sources. Confirming the identity of the site is important for developing better understanding and management of the submerged wreck, it would also enable positive commemoration to all 32 who lost their lives in the sinking. In good underwater visibility, and because of the shifting sands, other clues and interesting features have the potential to become apparent to help understand the site, making this wreck a good candidate for future research and investigation to prove positively its identity.

7. Bibliography

Websites

Books

8. Appendices

8.1 Crew List
The Crew List taken from the Wrecksite EU website (which is taken from the Tower Hill memorial) names 31 men but 32 were reported lost.

ALVAREZ, JOSE (23), Fireman and Trimmer, S.S. Hazelwood, †19/10/1917, Born in Spain, Memorial: Tower Hill Memorial
ANDERSON, JAMES FORTUNE (35), Master, Hazelwood, †19/10/1917, Son of John Anderson and Helen Bruce Anderson, of 26, Feagushe, Paisley; husband of Elsa Margarete Anderson, of 5, Kaiser Friedrich Strasse, Germany, Memorial: Tower Hill Memorial
ANSTEE, WILLIAM (44), Able Seaman, S.S. Hazelwood, †19/10/1917, Son of Margaret Anstee (nee Costello), of 8, Hutchison Avenue, Aldgate, London, and the late John Anstee. Born at Marylebone, Memorial: Tower Hill Memorial
BIGELOM, ARTHUR GOWLAND (32), First Engineer, S.S. Hazelwood, †19/10/1917, Son of Gowland and Sarah Bigelon; husband of Isabella Thompson Bigelon (nee Turnbull), of 15, Carlyon St., Sunderland. Born at Sunderland, Memorial: Tower Hill Memorial
BLACK, CHARLES ROBERT (33), Second Mate, S.S. Hazelwood, †19/10/1917, Son of Rosalind Black, and the late Robert Black; husband of Annie Elizabeth Black (nee Baron), of 8, Blenheim St., Hull. Born at Hull, Memorial: Tower Hill Memorial

BUTLER, T T (17), Second Cook, S.S. Hazelwood, †19/10/1917, Son of Mr. and Mrs. Butler, of 10, Waterville Terrace, North Shields. Born at North Shields, Memorial: Tower Hill Memorial

CANNON, GEORGE (41), Fireman and Trimmer, S.S. Hazelwood, †19/10/1917, Son of the late Patrick and Annie Cannon. Born at Hull, Memorial: Tower Hill Memorial

CHRISTIE, PHILIP WILLIAM (53), Boatswain, S.S. Hazelwood, †19/10/1917, Son of the late Ann Christie. Born at Blackhills, Ord, Banff, Memorial: Tower Hill Memorial

COX, WILLIAM JAMES (33), Leading Seaman (no. 204997), S.S. Hazelwood, †18/10/1917, Long Service and Good Conduct Medal. Son of James and Agnes Cox, of Brixham, Devon. Service: RFR/DEV/B/5623, Memorial: Plymouth Naval Memorial

DONOVAN, MICHAEL (42), Fireman and Trimmer, S.S. Hazelwood, †19/10/1917, (Served as AHERN), Son of the late Daniel and Hannah Donovan (nee Sullivan). Born at Cork, Memorial: Tower Hill Memorial

FRAMPTON, GEORGE (44), Chief Steward, S.S. Hazelwood, †19/10/1917, Son of John Samuel and Charlotte Frampton; husband of Elizabeth Ann Frampton (nee Lorimer), of 107, Collingwood St., South Shields. Born at Sydney, New South Wales, Memorial: Tower Hill Memorial

GIBSON, JOHN WILLIAM (35), Fireman and Trimmer, S.S. Hazelwood, †19/10/1917, Son of John William and Elizabeth Gibson (nee Brown), of 4, Ernest St., Jarrow, Co. Durham, Memorial: Tower Hill Memorial

GONZALEZ, FEDERICO (23), Sailor, S.S. Hazelwood, †19/10/1917, Born in Spain, Memorial: Tower Hill Memorial

HENRY, JOHN (33), Able Seaman, S.S. Hazelwood, †19/10/1917, Born at Saba, West Indies, Memorial: Tower Hill Memorial

KELLY, JOHN JOSEPH (20), Wireless Operator, S.S. Hazelwood, †19/10/1917, Son of Mary Kelly, of Longford House, Laird St., Birkenhead, and the late John Kelly, Memorial: Tower Hill Memorial

LILBURN, ARTHUR (37), Ordinary Seaman, S.S. Hazelwood, †19/10/1917, Born at North Shields, Memorial: Tower Hill Memorial

MACLEAN, MURDO (37), Seaman (no. 8309A), S.S. Hazelwood, †18/10/1917, Son of Mr. and Mrs. MacLean, of Canniscoille, Achiltibuie, Ross-shire, Memorial: Portsmouth Naval Memorial

MANGOS, K (31), Able Seaman, S.S. Hazelwood, †19/10/1917, Born in Greece, Memorial: Tower Hill Memorial

8.2 Newspaper Cuttings
A newspaper cutting announcing the launch of SS Hazelwood from the Hartlepool Northern Daily Mail on Saturday 19 December 1903.
LAUNCH AT STOCKTON.

Messrs. Ropner and Son, Stockton-on-Tees, yesterday launched from their yard a steel screw steamer of the following dimensions: Length, 336ft. 3in.; breadth, 48ft.; depth, 24ft. 3in.

The vessel will be classified 100 A at Lloyd’s on the three-deck rule, having one deck laid and a tier of hold beams, full poop, long bridge, and T.G. forecastle. Accommodation for captain, officers, and engineers in houses on bridge deck, crew in the forecastle.

The vessel has double bottom for water ballast on the cellular principle, and in after peak. She will be fully equipped with an up-to-date outfit, including quick warping steam windlass, stockless anchors, steam steering gear amidships, and powerful screw gear aft. The appliances for loading and discharging cargoes expeditiously are very complete, and include five steam winches, steam being supplied by a patent multitubular donkey boiler.

The engines will be of the triple-expansion type by Messrs. Blair and Co., Ltd., of Stockton, of about 1,100 i.h.p., having two steel boilers, 15ft. 3in. by 10ft. 3in., 160lbs. steam pressure.

The vessel has been built to the order of Messrs. the Constantine and Pickering Steamship Company, Middlesbrough, and the christening ceremony was gracefully performed by Miss E. L. Thomson, Linthorpe, Middlesbrough, who gave the vessel the name of Hazelwood.
